Project Option 1: RecipeBuddy

We enjoy cooking, but we find most cooking websites and apps tedious to use.

In this project you will create either a website or an app that allows the user to store recipes. The user can rate their recipes and indicate the number of times they have cooked the recipe. The user can provide a list of ingredients and the application should return a sorted list of recipes that use those ingredients.

Project Option 3: Majorizer

As a student you often want to select double majors or minors. The current Clarkson system makes it difficult to figure out the requirements.

In this project you will create either a website or an app where you can select two or more majors and / or minors. The system should generate a list of pre-requisite courses, faculty members who teach the class, when the class is offered and allow the student to figure out if they can complete the requirements by the time they graduate.

Team Name: PiercePrevostSinghManley
Report Number: 1
Reporting Week: 1

Summary of work completed in prior week:

Met as a group, introduced ourselves, and started planning which project we want to tackle. Our two top choices are the RecipeBuddy and the Majorizer. Talked about our strengths and weaknesses. Created a GitHub repo and added all the team members.

Summary of work planned for next week:

Prepare for project bidding on the 9th. Prepare questions to showcase our strengths and why we are a good fit for the desired project. Create slides and go over them on Wednesday, time ourselves, and make sure we are not going over 6 minutes.

Open issues and action plan to resolve them:

None

Project management summary

Team member	Tasks completed	Hours worked for week	Total hours
Michael Prevost	Go to meeting	1	1
Randeep Singh	Go to meeting	1	1
Taylor Manley	Go to meeting	1	1
Michael Pierce	Go to meeting	1	1

Meeting summary

For each team meeting provide the date, time, and location of the meeting. Indicate which members attended the meeting and action items discussed in the meeting.

       All 4 of us met in the ERC at noon on Sunday, September 5th. We talked about which project choices we wanted to do. We chose the RecipeBuddy as a first choice, and the Majorizer as a second choice. For code language, we narrowed it down to either C++ or Python, but we'll have to see exactly what we need to code before we get further than that.

       We plan to meet in person twice a week. Once on Sundays at noon, most likely for writing reports, then Wednesdays at 6 for general performance reviews.

       A github repo was created and all team members were invited to allow collaboration.
